

TECHNICOR

BULLETIN MARCH 2006

CNC ROUTER CAPABILITY EXPANDED

Chain rails and guides can now be supplied to you in 12 foot lengths. Our new, state-of-the-art router has a 5' X 12' table, rapid tool changer, the latest MasterCam software, providing our customers with superior surface finishes, extreme accuracy, lower unit costs, and better yield...a winning combination ! With multiple tables our lead times are shorter and production scheduling has more flexibility. Can we expand our service to you? Please ask us for a quote.

BIN ,CHUTE & TROUGH

LINERS Plastic liners are heat-formed to fit your existing troughs or chutes. They reduce friction, prevent sticking or freezing and eliminate corrosion of metal surfaces. Parts are CNC routed with pre-drilled mounting holes, before heat-forming, ensuring accuracy and consistency.

TIMING BELT PULLEYS

Wash-down solutions in food plants can be very corrosive. Delrin® pulleys made by TECHNICOR are replacing Aluminum ones. They are lighter and do not "weld" to the shaft. Can be supplied with or without side plates.

GIANT SPROCKET

The sprocket shown on the right is 47" in diameter and 1-1/2 " thick. Using our CNC equipment, we produced the finished product from a rough nylon casting. It is the largest sprocket we have manufactured to date. We invite your enquiries for custom thermo-plastic parts.
