

# PLASTIC TURNTABLE BEARINGS

**Large diameter thrust bearings for wet or corrosive environments can now be supplied by Technicor. The large bearing shown above measures 20" I.D X 28" O.D. Races, retainer, and balls are made from engineered plastics. Load capacity is 1750 lbs. and this can be boosted by adding more balls and/or incorporating a second ball track. We'd like to help you design and produce the right plastic bearing for your application!**
