OVERHEAD CONVEYOR WHEELS

Overhead chain conveyors in the poultry-processing industry can stretch for long distances, including multiple rises, corners, and driving auxiliary processing equipment. Some will use over 2,000 conveyor wheels in a single line. The wheels are designed for maximum load capacity at 130 lbs each, using 2 rows of full complement 400 series stainless steel balls. Frequent wash-downs subjects them to harsh, corrosive conditions. The rugged wheels shown are moulded and assembled in Canada from Technicor's own tooling.
