

PLASTICS SELECTION BY ELIMINATION

In addition to asking the “7 basic questions” when selecting plastics, the plastics Property Comparison Graph, right, can be a quick way to guide the selection process. Often the elimination of plastics that are obviously unsuitable results in a “short list” from which the best material can be chosen. The laminated coloured bar chart is available for free from TECHNICOR or can be downloaded from the TECHNICOR and IAPD websites. The chart’s flip-side, known as the Thermoplastic Rectangle, details the key characteristics of a variety of thermoplastics.
