

THERMOPLASTIC EXTRUSIONS

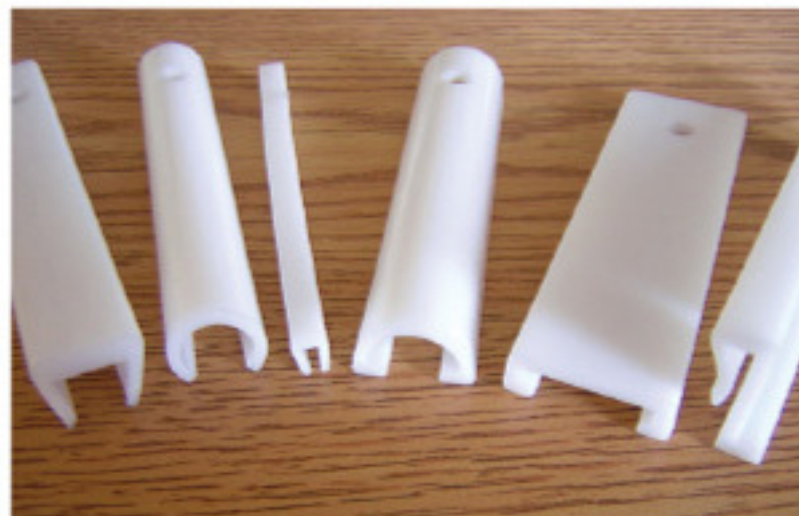

Today's conveyors are designed with many replaceable wear components, such as extruded guide rails, J-legs, U-channels, cage bar caps, flight edging, round and ½-round bar covers.

Many of these can be supplied in various materials such as UHMW, PVC, Nylon, and others, either white or with property-enhancing

additives. Technicor can help with your design by proposing and supplying profile extrusions.

Key industries include conveying, food processing, belting, marine, wire & cable, and water treatment plants.

Our technical sales reps stand ready to assist you with all your plastic needs.
