

## WASH-DOWN CONVEYOR ROLLERS USE ULTRA-SEAL CONVEYOR BEARINGS

ULTRA-SEAL conveyor end bearings are “blind” ball bearings for wash-down applications. Their design prevents bacteria build-up inside the conveyor rollers. Materials used are acetal and stainless steel. Two popular sizes fit into standard PVC schedule 40 pipe (1-1/2” and 2” PVC).

### MAJOR ADVANTAGES ARE:

- wash-down
- bacteria-free
- instant assembly
- intergral SS hardware including stub shaft
- adaptable to existing 7/16” hex frames

### SOME LIMITATIONS ARE:

- low load capacity (55 lbs. per bearing)
- maximum 24” roller length
- intolerant of impact loads
- hardware-grade (non-precision) bearings
